To,
The Hiring Manager / Talent Acquisition Team
Re: BI & Data Analytics Engineer Position

Dear Hiring Manager,

I am writing to express my strong interest in the **Senior BI & Data Analytics Engineer** position at your organization. With over **4+ years of enterprise experience** architecting end-to-end data solutions across **Microsoft Fabric, Power BI, and Azure**, I specialize in transforming complex, multi-source enterprise data into high-performance analytical systems. As triple Microsoft-certified professional holding credentials in **Fabric Data Engineering (DP-700)**, **Fabric Analytics Engineering (DP-600)**, and **Data Analysis (PL-300)**, I bring a proven track record of uniting modern AI capabilities with robust data engineering to accelerate strategic decision-making.

In my current role as a **Senior BI & Data Analytics Engineer** at Embee Software Pvt. Ltd., I have architected Medallion Lakehouse schemas (Bronze/Silver/Gold) and Data Warehouses within Microsoft Fabric to process multi-terabyte datasets. My technical background spans the full analytics stack—from orchestrating scalable Python pipelines and tuning SQL stored procedures to authoring advanced DAX measures for dynamic time-intelligence and executive reporting. Through rigorous query optimization and reusable Power Query flows, I achieved **99.9% report refresh reliability** and reduced report loading times by **45%**.

Beyond core business intelligence, I actively leverage modern AI and semantic data modeling techniques to deliver next-generation data solutions. I have designed comprehensive **Enterprise Data Ontologies** to harmonize cross-departmental entities into a robust single source of truth. Additionally, I integrated **Microsoft Copilot** into engineering workflows and engineered custom **Autonomous Data Agents** over Fabric semantic models, empowering stakeholders to execute natural language queries (NLQ) and cutting dashboard delivery cycles by **35%**.

I thrive in collaborative environments, leading requirements discovery with business leaders, facilitating UAT cycles, and implementing Dynamic Row-Level Security (RLS) to enforce strict data governance. I am eager to bring my expertise in Microsoft Fabric, AI Data Agents, and enterprise analytics to your team to drive immediate business value.

Thank you for your time and consideration. I look forward to discussing how my background aligns with your organization's goals.

Sincerely,

Koustav Paul

BI & Data Analytics Engineer
